

# Sprint 4 Report

## Actions to stop doing:

- The team has fallen into a rhythm and pattern that works for everyone and is productive. Over the iterations of the weeks we were able to hone our process and thus the team is satisfied.

## Actions to start doing:

- Reach out to potential users
  - This will allow us to find more issues that we won't notice ourselves because we are too familiar with the product.
  - This will also allow us to verify whether the application is intuitive for new users.

## Actions to keep doing:

- Performing code reviews
  - This has been a strong practice that allowed our team to catch more errors and make code easier to understand.

## Work completed/not completed:

### Completed:

- As a user, I want to be able to open directions to an event in Google Maps so that I don't get lost (3 story points).
- As a user, I want a way to communicate with the host of the event so that I can reach out with any questions/concerns (3 story points).

### Not Completed:

- As a user, I want to be able to delete my account so that it does not stay up when I leave Santa Cruz or stop hosting/attending events (1 story point).
- As an event organizer, I want to share my event using a link so that other users can access it easier (5 story points).

## Work completion rate:

- Total number of user stories completed: 2
- Total number of estimated work hours: 5
- Total number of days: 14
- Previous sprint user stories per day: 0.14
- Previous sprint work hours per day: 0.36
- All sprints average user stories per day: 0.23
- All sprints work hours per day: 1.29
