Sprint 1 Report

Actions to stop doing:

- Merging pull requests as a branch creator without having someone else test.
  - This is not the best practice to have as we would like more people on the team to look at PR's and give feedback.

Actions to start doing:

- Having other team members review and merge pull requests.
  - Feedback can be given much easier in this way, and PR's will be looked over more.
- Leaving code reviews on pull requests (comments).
  - This will help to keep quality and clean code in our repository.

Actions to keep doing:

- Creating branches to work on new features/issues.
  - This will keep all the features and issues organized and if any errors arise they will be contained to the branch.
- Creating pull requests when merging completed branches to main.
  - This is a very good engineering practice and ensures integration is smooth.

Work completed/not completed:

Completed:

- As a user, I want to gain access to the site through Google login so that event organizers are separate and people cannot impersonate me (8 story points).
- As a user, I want to see a map of Santa Cruz so that I can choose where to put an event (8 story points).

Not Completed:

- None

Work completion rate:

- Total number of user stories completed: 2
- Total number of estimated work hours: 17
- Total number of days: 14
- Previous sprint user stories per day: 0.14
- Previous sprint work hours per day: 1.21
- Burnup:
